9<sup>th</sup> December, 2008

Good morning, principal, vice-principals, teachers and fellow schoolmates. Today I would like to talk about the importance of applying information technology in our studies.

It is true that the application of information technology brings a lot of advantages and improves the quality of teaching and learning. Effective teaching and learning involve delivery of knowledge clearly and the process is closely related to our daily life. Software such as the mail serve or the Google Earth is helpful in these aspects. Students like us can also absorb new ideas and concepts faster than before.

For example, when the teacher is teaching the geography of Hong Kong, students will be more interested if there are instant images of the buildings and real landscape of Hong Kong. It is also beyond doubt that students who suffer from poor concentration can benefit. I hope that our school will take advantage of information technology in our teaching and learning. Thank you
