

Morning Assembly Sharing

Good Morning Principal, Vice Principals, teachers and fellow schoolmates. Today I would like to share my view on spam mail.

It was found that about 89% of e-mails sent to HK computers are spam. The situation is worse than in any other countries. As we know, electronic mail enables us to respond to each other quickly by sending and receiving messages, communications has become more efficient. Now, e-mail has been widespread in the business sector as most of the spam mails are sent by business enterprises. A large amount of spam may overload an e-mail server, this may cause inconvenience for people for they have to delete them every day. They can't fully enjoy the advantages of e-mail due to lots of junk e-mails on the internet. Despite the repeated attempts of the government to solve the problem, it is not an easy task to prevent spam mail from sending out. It is because most of the spam mails are sent from other countries, it is out of the control of HK government.

There are several ways people can do to protect themselves from receiving spam mails. For instance, people should be alert when using the internet, they should not reply any unknown email, do not register in any unknown website, etc. These methods can help them to lower the chance of receiving spam mails. Last but certainly not

the least, they should install antivirus software in case the emails contain viruses.
