

## Global Warming

Good morning Principal, Vice-Principals, teachers and fellow students.

Today, I would like to share something about global warming. A famous haven – Maldives has aroused the world's awareness of global warming recently. According to some environmentalists' investigation, the whole country will surely submerge into water before 2100 if the sea levels keep on rising. Therefore, the president of Maldives held an "underwater global warming summit" last Saturday.

In order to solve the problem, there are a few suggestions and we all have a role to play in these. First, we should have a better sense of recycling waste. This is because improper waste disposal will pollute our planet. To make matters worse, the waste will decompose to release global warming gases, for example, Methane. Secondly, we shouldn't rely on vehicles so much because the exhaust fumes released by the vehicles will fuel global warming. Thirdly, we should persuade our friends not using plastic bags. Well, here comes the end. I am so sure that our next generation will be not able to enjoy the beauty of nature if everyone of us adopts a wait-and-see attitude towards this urgent issue. Thank you.
