

Bees

Good morning Principal, teachers and fellow students,

Do you like honey? If you like honey, you should like bees. Bees make honey and help plants to make fruit. How do bees help make fruit?

A bee lands on a flower and the pollen of the flower gets on its body. Then it flies to another flower. The pollen will then pass from the last flower to the new one.

Bees have to fly from flowers to flowers if they want to make enough honey. They have to work very hard every day. Also, the more flowers they land on, the more fruit they help plants to make.

Students should be like bees. We should work very hard in order to make our honey and fruit. If we do not work hard now, we will not have enough food in the future. Thank you.
